#### **C4. SOFTWARE**

- AGORA-net: A collaborative argument mapping tool (no longer online). The source code is published under the Affero GPL (v3 or later) Open Source license at <https://github.com/MichaelHoffmann/AGORA>. AGORA-net was available for public use from August 2012 to January 2021. In August 2020, the AGORA database contained around 21,000 argument maps—each with about 12 text boxes on average—that were created by more than 2,100 unique users. The development has been supported by a grant from the U.S. Department of Education (Grant # P116-S10-0006. September 1, 2010, to August 31, 2015).
- The Reflect! platform: <http://reflect.gatech.edu>. Reflect! orchestrates, over several weeks, problem-based learning in small teams on wicked problems such as the governance of emerging technologies; complex policy issues such as health care reform, poverty, global trade, climate and environmental policies; the design of products and technologies; and planning processes with multiple and diverse stakeholders. The development of the Reflect! platform was supported by a grant from NSF's Cyberlearning and Future Learning Technologies program (Award 1623419, September 2016 to August 2020) and two grants from the Digital Integrative Liberal Arts Center in the Ivan Allen College of Liberal Arts.

#### **C6. ARGUMENT MAPS (SELECTION, NOT REFEREED)**

An argument map justifies a claim by reasons in a graphically arranged structure of text boxes and arrows. The reasons are usually justified by further reasons, and so on, so that the overall structure can be very large. In collaborative argument mapping (realized in AGORA), objections, comments, questions, friendly amendments, references, and links, but also additional arguments, can be added by other people. Objections and counter-arguments can also be used to represent entire debates, such as in the map "The Debate about the Stern-Review and the Economics of Climate Change" (Hoffmann, 2010, below). This map with about 220 text boxes is the largest I created so far. The list below contains only argument maps that were exported from AGORA or cmap and published elsewhere.

- 2022: On knowing what the facts are: A very brief history of epistemology and its political implications (48 min). Retrieved from <https://youtu.be/nOSV58RnTdA>

We are living in times in which matters of fact are becoming more and more contentious. Who won the presidential election of 2020? What are the facts regarding what happened on January 6 at the Capitol? Then there is declining trust in science and unfathomable belief in conspiracy theories. Many people are looking to philosophy and are asking for help: Isn't there just one truth? This talk summarizes 2,500 years of philosophical debate on the nature of knowledge. It is intended to explain the importance of epistemological issues to students and non-philosophers interested in politics, and it invites a discussion on what philosophy can contribute to securing the epistemological foundations of democracy.

- 2013: TechDebates on emerging technologies

This series of debates—hosted by myself as the Co-Director of Georgia Tech's Center for Ethics and Technology—was intended to stimulate public reflection and deliberation on emerging technologies. What is the purpose of these technologies? What are the risks and ethical concerns? How will they change society and what it means to be human?

Only one pilot debate was realized on November 18, 2013: The TechDebate on Lethal Autonomous Robots ("Killer Robots"). We asked two experts to help us—from their varying points of view—to navigate through the complexity of deliberations that are still in their infancy: Ron Arkin, Professor at Georgia Tech's College of Computing, and Rob Sparrow, Philosophy Professor at Monash University in Australia and one of the founding members of the International Committee for Robot Arms-Control (icrac.net). Each TechDebate was planned to be a live event both on the Georgia Tech campus and on the Internet. The TechDebate on Lethal Autonomous Robots (1h 28 min) is published on YouTube: [http://youtu.be/nO1oFKc\\_-4A](http://youtu.be/nO1oFKc_-4A).

## **Teaching**

### **A. Goals**

The goal of my teaching is to foster general reasoning skills: reflection and self-correction; how to approach wicked problems; how to construct strong and convincing arguments; how to assess the quality of arguments; how to clarify ideas and define concepts; learning to work in teams and

collaborative problem solving; social learning through mutual criticism and support; enjoying clear thinking.

## C. VIP Digital Deliberation

VIPs—Vertically Integrated Projects—are an innovative teaching approach in which undergraduate students work for up to three years for academic credit in multidisciplinary research teams with graduate students and faculty. These are long-term projects that follow the research trajectory of faculty. Students rotate in and out. Some VIPs at Georgia Tech worked for over 15 years. The international [VIP Consortium](#) coordinates currently VIP teams at 44 institutions in 13 countries.

Since August 2016, I am directing the VIP Digital Deliberation (the first year in partnership with Prof. Chris Le Dantec, LMC). In the first years, between four and eight undergraduate students worked each semester on tasks relating to design and development of the Reflect! platform, as well as usability testing and future developments. Since the fall of 2022, more than twenty students participated per semester. Our VIP Digital Deliberation was supported by two grants from the Digital Integrative Liberal Arts Center (DILAC) in the Ivan Allen College of Liberal Arts at Georgia Tech which paid for a graduate research assistant (August 2016 to December 2017 and August 2018 to May 2019).

### **B. Public and community service**

Creator of the The English Avenue Justice Program, an initiative of the Center for Ethics and Technology (CET). The English Avenue community is Georgia Tech’s poor and distressed neighbor in the West of campus. In collaboration with the Westside Community Alliance, CET developed projects relating to social justice and the ethics of the built environment that are designed in collaboration with partners in the English Avenue community and integrated in regularly offered courses and seminars. The program started in the fall of 2013 with the newly developed Seminar “Social Justice, Critical Theory, and Philosophy of Design.”

Projects included:

- A collaboration with Safe Routes to School Georgia (<http://saferoutesga.org>) to establish those routes in the English Avenue neighborhood. The development of those routes was conceptualized as a strategy for community development.
- Co-Organizer of the Community Think Tank in English Avenue on Human Development, in a collaboration with the Historic Westside Cultural Arts Council (HWCAC). The Think Tank organized a series of community meetings from November 2013 to May 2015. The Think Tank aimed to offer an open place in the English Avenue neighborhood for the community, and for adjacent communities, on Atlanta’s West Side to explore and deliberate conditions and possibilities of human development for the people living there. The focus was largely on African Americans and others who are marginalized by public and social policies. As part of this, a public event on the Georgia Tech campus was organized.

Deliberating controversial issues in the public sphere. In a project realized with undergraduate students, we invited three representatives of civic organizations in Atlanta, Georgia, to develop a proposal on how to deal with the huge Confederate Memorial that is carved into Stone Mountain, Georgia. One participant was a Caucasian male who is associated with the Old Guard of the Gate City Guard of Atlanta, an organization that was originally chartered in 1859 as a local militia in Atlanta which was known as the “Gate City of the South.” The second participant was an African American male artist and actor, and the

third a Caucasian male who is a member of the Georgia Battlefields Association. His ancestors fought for the Union. We arranged four meetings with these three stakeholders in November of 2018. Results and observations of the process are published by Michael Hoffmann in *Social Science Quarterly* (2021, Vol. 102/3) under the title: “Reflective Consensus Building on the Nation’s Largest Confederate Memorial. A Case Study.”
